DETAILED ACTION

Claim Objections

Claims 5-8 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 3 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by the prior art depicted by Applicant's Fig. 12.

The prior art, Fig. 12 discloses a signal transmission circuit including:

a printed wiring board (2) including input wiring (7) connected to the input terminal section (14), wiring for grounding (GND), and an insulation board (9) on which the input wiring (7) and the grounding wiring (GND) are formed;

a transistor (4) having a base terminal (17) , which connected to the input wiring (7), and emitter terminal which is connected to the grounding wiring (GND), and a collector terminal which is connected to the processing circuit section (PROCESSING CIRCUIT SECTION);

Art Unit: 2816

a reference voltage source (REFERENCE VOLTAGE SOURCE) for supplying a predetermined reference voltage to the collector terminal of the transistor (4);

a resistor (5) which is connected in parallel between the input wiring (7) and the base terminal (17) of the transistor (4), and the emitter terminal of the transistor (4);

a first capacitor (1), one terminal of which is connected to the input wiring (7);

a portion of the input wiring (7) extending from a connection point with the first capacitor (1) to a connection point with the resistor (5) being placed in a vicinity of the grounding wiring (the vicinity of the grounding wiring is seen as GND);

a parasitic capacitance (is inherent seen between the base and the emitter terminal of the transistor 4) being generated between the portion and the grounding wiring (GND) as recited in claim 3.

Regarding claim 7:

an input terminal section (INPUT TERMINAL SECTION) to which a signal is inputted;

a processing circuit section (PROCESSING CIRCUIT SECTION) in which a signal is processed; and

the signal transmission circuit (3) that connects the input terminal section (INPUT TERMINAL SECTION) and the processing circuit section (PROCESSING CIRCUIT SECTION).

Allowable Subject Matter

Claims 1-2 and 4 are allowable over the prior art of record.
